

FOR IMMEDIATE RELEASE

**NATIONWIDE BOILER’S TEXAS FACILITY RECEIVES
R-STAMP CERTIFICATION**

Fremont, California, June 26, 2024.....Nationwide Boiler Inc. is proud to announce the achievement of the National Board “R” Certificate of Authorization for their sales, storage, and maintenance facility located in Alvin, Texas. The R-Stamp Certification, officially known as the “R” Certificate of Authorization, allows Nationwide Boiler’s Texas shop to perform boiler and pressure-vessel repairs and alterations both in-shop and in-the-field, as specified by the National Board Inspection Code (NBIC). Nationwide Boiler also maintains the R-Stamp certification at their Shop Headquarters in Fremont, California.

The “R” Certificate of Authorization ensures that all work conducted by the company adheres strictly to the rigorous standards set forth by the National Board to guarantee quality, reliability, and safety. The certification process involved a thorough review and rigorous evaluation of Nationwide Boiler’s Welding Procedure, set by Nationwide Boiler and the NBIC, by a dedicated review team from the National Board. Nationwide’s Certifying Engineer, Jay Mills, showcased his knowledge of ASME Section VIII alteration calculations on a deaerator tank, while the Welding Supervisor, Aaron Smith, demonstrated the successful procedure with a full penetration weld. Additionally, Nationwide Boiler’s Katelyn LeJeune assumed the role of QC Manager and demonstrated all steps involved in purchasing and receiving code materials, as specified by ASME Code Section II. This comprehensive assessment ensures that the company’s procedures, practices, and staff qualifications meet the stringent requirements necessary for the “R” Symbol authorization, further validating the strength of the company’s QC program.
